The designations employed and the presentation of material in this publication do not imply the expression of any opinion whatsoever on the part of the Secretariat of the United Nations concerning the legal status of any country, territory, city or area or of its authorities, or concerning the delimitation of its frontiers or boundaries.

Les appellations employées dans cette publication et la présentation des données qui y figurent n'impliquent de la part du Secrétariat de l'Organisation des Nations Unies aucune prise de position quant au statut juridique des pays, territoires, villes ou zones, ou de leurs autorités, ni quant au tracé de leurs frontières ou limites.

Употребляемые обозначения и изложение материала в настоящем издании не означают выражения со стороны Секретариата Организации Объединенных Наций какого бы то ни было мнения относительно правового статуса страны, территории, города или района, или их властей, или относительно делимитации их границ.

EXPLANATORY NOTES

The purpose of the *Annual Bulletin of Gas Statistics for Europe* is to provide basic data on developments and trends in the field of gaseous fuels in European countries, Canada^(a) and the United States of America. The data refer to production, stocks, inland availabilities, deliveries, trade, calorific values, fuels used for the production of gasworks gas, number of household consumers and length of mains. This publication is purely statistical in character. For an analysis of the gas situation and its prospects, reference may be made to the periodic reviews prepared by the secretariat of the United Nations Economic Commission for Europe (see Annex I).

Sources

The statistics appearing in this bulletin are compiled by the secretariat of the United Nations Economic Commission for Europe from replies to questionnaires supplied by various countries, or from official national sources.

Comparability of data

Data are given according to the commonly agreed definitions which have been worked out under the auspices of the Committee on Gas of the United Nations Economic Commission for Europe (see Annex II). Where individual series differ fundamentally from the agreed definitions and/or the coverage is incomplete, this is indicated in footnotes.

Time period

The statistics are presented in the form of time series. Figures are given for the last four calendar years and for 1970 which is the base period used by the United Nations and the statistical departments of the specialized agencies for calculations of index numbers. In the tables relating to trade and length of mains, figures are given for the last two calendar years.

Unit of measurement

In general, data in tables 1, 2 and 3 are given in teracalories and are based on the gross calorific values of the respective gases.

Rounding

Where necessary, each figure has been rounded off to the nearest final digit. For this reason, there may occur in some series an apparent slight discrepancy between the sum of the constituent items and the totals.

Revisions

In general, the data for the last year should be treated as provisional while those for the previous year as final. Revised data in respect of previous issues are indicated by the letter "r".

Nomenclature

The data which relate to the Federal Republic of Germany and the German Democratic Republic include the relevant data relating to Berlin for which separate data have not been supplied. This is without prejudice to any question of status which may be involved.

Symbols and abbreviations employed

- E = Official estimate
- * = Secretariat estimate.
- = Not applicable.
- ... = Not available.
- = Magnitude zero.
- O = Magnitude not zero, but less than half of unit employed.
- | = Series changed.
- r = Revised data in respect of previous issues.
- G = Gross calorific value.
- N = Net calorific value.

kcal/m³(st) = kcal per cu.m. of gas under standard conditions of 15°C, 1013.25 mbar, dry.

Tcal = Teracalorie = 10⁹ kcal.

Nm³ = Normal cubic metre.

(a) Published for the first time in this issue of the bulletin.

NOTES EXPLICATIVES

Le *Bulletin annuel de statistiques du gaz pour l'Europe* a pour objet de fournir des données de base sur l'évolution et les tendances dans le domaine des combustibles gazeux dans les pays européens, au Canada^(a) et aux Etats-Unis d'Amérique. Ces données se rapportent à la production, aux stocks, aux disponibilités intérieures, aux livraisons, au commerce, aux pouvoirs calorifiques, aux combustibles utilisés pour la production de gaz d'usine à gaz, au nombre de consommateurs et à la longueur des conduites. Cette publication est de caractère purement statistique. Pour l'analyse de la situation et des perspectives dans le domaine des combustibles gazeux on se reportera aux rapports périodiques élaborés par le secrétariat de la Commission économique pour l'Europe de l'Organisation des Nations Unies (voir Annexe I).

Sources

Les statistiques publiées dans ce bulletin sont réunies par le secrétariat de la Commission économique pour l'Europe de l'Organisation des Nations Unies à partir des réponses aux questionnaires adressés aux différents pays, ou extraites de publications nationales officielles.

Comparabilité des données

Les données sont conformes aux définitions adoptées par le Comité du gaz de la Commission économique pour l'Europe de l'Organisation des Nations Unies (voir annexe II). Lorsqu'une série s'écarte trop de ces définitions ou que les données sont incomplètes, ces divergences sont signalées dans des notes.

Période couverte

Les statistiques sont présentées sous forme de séries chronologiques. Les chiffres se rapportent aux quatre dernières années civiles, et à l'année 1970, qui constitue la période de base utilisée pour le calcul des indices, par l'Organisation des Nations Unies et les services statistiques des institutions spécialisées. Dans les tableaux relatifs au commerce et à la longueur des conduites, les chiffres se réfèrent aux deux dernières années civiles.

Unité de mesure

Les données des tableaux 1, 2 et 3 sont généralement indiquées en téralories et sont calculées à partir des pouvoirs calorifiques supérieurs respectifs des gaz.

Arrondissement des chiffres

Chaque fois qu'on l'a jugé nécessaire, les nombres ont été arrondis à l'unité du dernier chiffre significatif. Il peut donc y avoir, pour certaines séries, une légère différence entre la somme des éléments constituants et le total indiqué.

Revisions

En général, les données relatives à la dernière année doivent être considérées comme provisoires, tandis que celles des années précédentes peuvent être considérées comme définitives. Les données révisées par rapport à celles des bulletins précédents sont suivies de la lettre "r".

Nomenclature

Les données se rapportant à la République fédérale d'Allemagne et à la République démocratique allemande incluent des données relatives à Berlin pour lequel des données séparées n'ont pas été fournies. Cela sans préjudice des questions de statut qui peuvent se poser à cet égard.

Signes et abréviations conventionnels

- E = Estimation officielle.
- * = Estimation du secrétariat.
- . = Ne s'applique pas.
- ... = Aucune donnée disponible.
- = Résultat rigoureusement nul.
- 0 = Résultat inférieur à la moitié de la dernière unité retenue.
- | = Changement de série.
- r = Donnée révisée par rapport à celle des numéros précédents.
- G = Pouvoir calorifique supérieur.
- N = Pouvoir calorifique inférieur.

$\text{kcal/m}^3(\text{st}) = \text{kcal par m}^3 \text{ de gaz en volume standard (à } 15^\circ\text{C, } 1013,25 \text{ mbar, gaz sec).}$

Tcal = Téralorie = 10^9 kcal.

Nm³ = Mètre cube normal.

(a) Publié pour la première fois dans le présent numéro du bulletin.

ПОЯСНИТЕЛЬНЫЕ ПРИМЕЧАНИЯ

Цель *Ежегодного бюллетеня европейской статистики газа* состоит в представлении основных данных о развитии и тенденциях в области газообразного топлива в европейских странах, Канаде^(а) и Соединенных Штатах Америки.¹ Данные относятся к производству, запасам, внутреннему наличию, поставкам, торговле, теплотворным способностям, топливу, использованному для производства заводского газа, числу домашних хозяйств и протяженности сетей.¹ Эта публикация носит чисто статистический характер.¹ Для анализа положения с газом и перспективами можно использовать периодические обзоры, подготовленные Секретариатом Европейской Экономической Комиссии Организации Объединенных Наций (см. приложение I).¹

Источники

Статистические данные, приводимые в настоящем бюллетене, взяты Секретариатом Европейской Экономической Комиссии Организации Объединенных Наций из ответов на вопросники, представленных различными странами, или из официальных национальных источников.

Сопоставимость данных

Данные приводятся в соответствии с согласованными определениями, которые были выработаны Комитетом по газу Европейской Экономической Комиссии Организации Объединенных Наций (см. приложение II). В тех случаях, когда отдельные данные существенно отличаются от согласованных определений и/или охват является неполным, различие указывается в примечаниях.

Отчетный период

Статистические данные представляются в форме динамических рядов.¹ Данные приводятся за последние четыре календарных года и за 1970 год, который является базисным периодом, используемым Организацией Объединенных Наций и статистическими департаментами специализированных учреждений для расчета индексов.¹ В таблицах по торговле и по протяженности сетей данные приводятся за последние два календарных года.¹

Единица измерения

Как правило, данные в таблицах 1, 2 и 3 даются в теракалориях и основываются на высших теплотворных способностях соответствующих газов.

Округление

В тех случаях, когда это необходимо, каждая цифра округлена до ближайшего окончательного разряда. Поэтому в некоторых рядах данных могут иметь место небольшие расхождения между суммой данных по отдельным статьям и приведенными итогами.

Пересмотр данных

Как правило, данные за последний год следует считать предварительными, а данные за предыдущие годы — окончательными. Приводимые в пересмотренном виде данные предыдущих выпусков бюллетеня отмечаются буквой "r".

Номенклатура

Данные относящиеся к Германской Демократической Республике и к Федеративной Республике Германии, включают соответствующие данные по Берлину, по которому отдельные данные не были представлены. Это никоим образом не затрагивает вопросы, связанные со статусом.

Условные обозначения и сокращения

- E = Официальная оценка.
- * = Оценка Секретариата.
- = Не применимо.
- ... = Данные отсутствуют.
- = Нулевая величина.
- 0 = Величина не нулевая, но меньше половины применяемой единицы измерения.
- | = Измененные ряды.
- r = Пересмотренные данные предыдущих выпусков.
- G = Высшая теплотворная способность.
- N = Низшая теплотворная способность.

Ккал/м³(см) = Ккал на м³ газа при стандартных условиях (15°C, 1013,25 мбар, в сухом состоянии).¹

Ткал = Теракалория = 10⁹ Ккал.¹

Нм = Нормальный кубический метр.

(а) Впервые опубликовано в этом издании бюллетеня.¹

(a) Data relating to coke-oven gas are included under gasworks gas, whereas those shown under the heading "coke-oven gas" refer to unspecified gases.

(a) Les données relatives au gaz de cokerie sont comprises sous gas d'usine à gas, tandis que celles indiquées sous le titre "gaz de cokerie" se réfèrent aux gas non spécifiés.

(a) Data for item 12.12 are included under item 14.

(b) Gas supplied to producers of gasworks gas.

(c) Gas supplied to producers of blast furnace gas.

(d) Gas supplied to producers of coke-oven gas.

(a) Les données de la rubrique 12.12 sont comprises sous la rubrique 14.

(b) Gas livré aux producteurs de gaz d'usine à gaz.

(c) Gas livré aux producteurs de gaz de haut fourneau.

(d) Gas livré aux producteurs de gaz de cokerie.

(a) Statistical differences are included under changes in stocks (item 5).

(b) Data of item 12.1 are included under item 13.11 (13;13.1).

(a) Les écarts statistiques sont compris sous mouvements de stocks (rubrique 5).

(b) Les données de la rubrique 12.1 sont comprises sous celles de la rubrique 13.11 (13;13.1).

(a) Including data for the Byelorussian and Ukrainian SSR.

(b) Including 6581 Tcal of natural gas condensates.

(c) LPG stripped from imported natural gas.

(d) Data of items 12.11, 12.12 and 12.14 are included under item 13.11.

(a) Y compris les données de RSS de la Biélorussie et de l'Ukraine.

(b) Y compris 6581 Tcal de condensats de gaz naturel.

(c) GPL extraits du gaz naturel importé.

(d) Les données des rubriques 12.11, 12.12 et 12.14 sont comprises sous la rubrique 13.11.

(a) Исходные данные по Восточной и Украинской ССР.

(b) Включая 5 561 Ткал конденсата природного газа.

(c) Сжиженный нефтяной газ, полученный из восточнорусского природного газа.

(d) Данные статей 12.11, 12.12 и 12.14 включены в статьи 13.11.

Explanation of code :

G = Gross calorific value.
N = Net calorific value.

- (a) Unit : kcal/kg.
(b) Gas at a temperature of 0° C.
(c) Including coke-oven gas.
(d) Unspecified gases not shown separately.

- (e) Propane-air mixture, 6 500 - 13 500 kcal/m³.
(f) Calorific value of natural gas imported from the Federal Republic of Germany. For gas imported from France, the calorific value is 8 400(G) and 7 560(N) respectively.

4. POUVOIR CALORIFIQUE MOYEN DU GAZ PRODUIT

| ... | ... | ... | ... | ... | |

Explication du code :

G = Pouvoir calorifique supérieur.
N = Pouvoir calorifique inférieur.

- (a) Unité : kcal/kg.
(b) Gaz d'une température de 0° C.
(c) Y compris du gaz de cokerie.
(d) Gaz non spécifiés, pour lesquels les données ne sont pas indiquées séparément.
(e) Air propane, 6 500 - 13 500 kcal/m³.
(f) Pouvair calorifique du gaz naturel importé de la République fédérale d'Allemagne. Pour le gaz importé de la France, le pouvair calorifique est de 8 400(G) et de 7 560(N) respectivement.

Объяснение кода:

G = Высшая теплотворная способность.
N = Низшая теплотворная способность.

- (a) Единица: ккал/кг.
(b) Газ при температуре 0° C.
(c) Ливецкая коксовый газ.
(d) Неопределенные газы не показаны раздельно.
(e) Пропан-воздушная смесь 6 500 - 13 500 ккал/м³.
(f) Теплотворная способность природного газа, импортированного из Федеративной Республики Германии. Теплотворная способность газа, импортированного из Франции - 8 400(G) и 7 560(N) соответственно.

ПРИЛОЖЕНИЕ I

ПЕРЕЧЕНЬ ПЕРИОДИЧЕСКИХ ОБЗОРОВ ЕЭК ПО ГАЗУ

Тенденция развития европейского газового хозяйства, 1956, E/ECE/246, Доклад об экономическом положении европейского рынка природного газа, 1957, E/ECE/289, E/ECE/GAS/7, номер для заказов — 57.II.E/Mim.6; Годовой обзор положения европейского газового хозяйства (1955—1959 и 1959—1960), E/ECE/GAS/2, номер для заказов — 62.II.E/Mim.19; Европейские рынки природного газа в 1961 году, ST/ECE/GAS/3, номер для заказов — 62.II.E/Mim.20; Положение и перспективы европейского газового хозяйства, 1962, ST/ECE/GAS/4, номер для заказов — 62.II.E/Mim.18; Годовой обзор положения европейского газового хозяйства в 1960—1961 гг., ST/ECE/GAS/8, номер для заказов — 63.II.E/Mim.11; Годовой обзор положения европейского газового хозяйства в 1961—1962 гг., ST/ECE/GAS/10, номер для заказов — 64.II.E/Mim.16; Положение европейского газового хозяйства в 1963/1964 году и его перспективы, ST/ECE/GAS/16, номер для заказов — 66.II.E/Mim.24; Положение европейского газового хозяйства в 1964/1965 году и его перспективы, ST/ECE/GAS/20, номер для заказов — 67.II.E/Mim.35; Положение европейского газового хозяйства в 1966—1968 гг. и его перспективы, трехгодичный обзор, ST/ECE/GAS/32; Положение европейского газового хозяйства в 1970 году и его перспективы, GAS/Working Paper No.256/Add.1; Положение европейского газового хозяйства в 1969—1971 гг. и его перспективы, трехгодичный обзор, ECE/GAS/3; Положение европейского газового хозяйства в 1972 году и его перспективы, ECE/GAS/11; Положение европейского газового хозяйства в 1973 году и его перспективы, ECE/GAS/19; Положение и перспективы в области газового хозяйства в районе ЕЭК, трехгодичный обзор, 1972—1974 гг., ECE/GAS/25.

ANNEX II

DEFINITIONS AND GENERAL NOTES

The following definitions of items covered by the Annual Bulletin of Gas Statistics for Europe relate to those established under the auspices of the Conference of European Statisticians and the Committee on Gas of the United Nations Economic Commission for Europe. Where individual series differ fundamentally from these definitions, and/or the coverage is incomplete, the differences are indicated in footnotes.

Gases

Natural gas - Natural gas covers both non-associated natural gas (i.e. that originating from fields producing only hydrocarbons in gaseous form) and associated natural gas (i.e. that originating from fields producing both liquid and gaseous hydrocarbons), and also methane stripped at casing heads and recovered in coal mines, and sewage gas.

Gasworks gas - Gasworks gas covers all types of gases produced by undertakings, of one legal form or another, whose main purpose is production, transport and distribution of manufactured gas. It includes gas produced by carbonization (including gas produced by coke-ovens at gasworks and municipal plants), total gasification with or without enrichment with oil products, by cracking of natural gas, and by reforming and simple mixing of gases.

Coke-oven gas - Coke-oven gas is obtained as a by-product of solid fuel carbonization and gasification operations carried out by industrial establishments which are not dependent on gasworks and municipal plants.

Blast furnace gas - Blast furnace gas is obtained as a by-product in blast furnaces; it is recovered on leaving the furnace.

Refinery gas - Refinery gas covers non-condensable gas collected in petroleum refineries.

Liquefied petroleum gas produced at crude petroleum and natural gas sources - It covers hydrocarbons extracted by stripping of natural gas at crude petroleum and natural gas sources, i.e. liquefied butane, liquefied propane and any commercial mixture of both.

Liquefied petroleum gases (excl. that produced at crude petroleum and natural gas sources) - It covers hydrocarbons produced both in refineries and outside refineries in the course of processing of crude petroleum or its derivatives. Included are mainly propane and butane.

Main items of gas statistics

Item 1 : Production

Production of gas refers to the quantities of gas extracted or produced, calculated after any operation for removal of inert matter contained in gas. In general (if not otherwise stated below) production includes the quantities consumed by the producer in the production process as well as supplies to other producers of energy for transformation or other uses.

In general, production of gas refers to the production by undertakings, of one legal form or another, the essential purpose of which is the production, transmission and distribution of gas. In addition gas produced outside the mentioned undertakings (e.g. in coke-ovens, in carbon chemical industry) are also included. As to the petro-chemical industry, only net restitutions of gas (e.g. LPG) are taken into account.

Natural gas - Production of natural gas refers to the amount of gas collected from underground sources after: (i) removal of sulphur and nitrogen contents, if practised; (ii) removal of useful liquid fractions, where applicable; (iii) deduction of quantities of natural gas reinjected, if practised; (iv) deduction of the amount of gas used for drying.

Gasworks gas - Production of gasworks gas includes gas produced by carbonization (including gas produced by coke-ovens at gasworks and municipal plants), total gasification with or without enrichment with oil products, by cracking of natural gas, and by reforming and simple mixing of gases.

Coke-oven gas - Production of coke-oven gas refers to the amount of gas collected. It does not therefore include the amount of gas wasted.

Blast-furnace gas - Production of blast-furnace gas refers to the amount of gas collected. Data are given net, that is, excluding the amount of gas wasted, such as by flaring, as well as the amount of gas used in blast furnaces for blast heating and other purposes.

Refinery gas - Production of refinery gas refers to the amount of gas produced. Data are given net, that is, excluding the amount of gas consumed by the refineries.

Liquefied petroleum gases - Production of liquefied petroleum gases includes: (i) hydrocarbons extracted by stripping of natural gas, at crude petroleum and natural gas sources; (ii) hydrocarbons extracted by stripping of imported natural gas in installations of the importing country; and (iii) hydrocarbons produced both in refineries and outside refineries in the course of processing of crude petroleum or its derivatives. Production of liquefied petroleum gases refers to the amount of these gases produced after deduction of any own consumption by producers of these gases.

Item 2 : Imports ; Item 3 : Exports

Data on imports and exports refer to the amount of gas obtained from or supplied to other countries respectively, whether or not there is an economic or customs union between the respective countries. In principle, transit trade is excluded. In general, data on imports and exports are based on declarations submitted by producers (or exporters) and importers; they may therefore differ from data supplied by the customs services and published in foreign trade statistical bulletins.

In the case of imports of natural gas containing certain quantities of liquefied petroleum gases, the whole amount of gas imported (i.e. including LPG contained in it) is recorded as imports of natural gas. The amount of LPG extracted by stripping of imported natural gas in installations of the importing country is included under item 9 and in the production figure of LPG (item 1), and also shown separately under item 9.23.

Item 5 : Changes in stocks

Changes in stocks refer to the difference between the amount of gas in stocks at the beginning and the end of the year. The signs + for net increases and - for net decreases in stocks are used. Under this item are counted also variations in stock of natural gas in pipelines, if the relevant data can be obtained; otherwise they are included with losses in transport and distribution (item 14).

Item 9 : Gas converted

This item includes: (i) quantities of gas used for production of electric energy in all thermal power plants, i.e. public supply undertakings of electric energy (the essential purpose of which is the production, transmission and distribution of electric energy) and thermal power plants of self-producers (e.g. thermal power plants operated by iron and steel works and other industries, railway authorities' power plants), including own thermal power plants of gas producers, if any (item 9.1); (ii) quantities of gas supplied by the respective gas industries to other gas producers for cracking, reforming and mixing processes (item 9.2) (the amount of gas supplied to gas producers for distribution (resale) as such, is excluded if it was possible to obtain separate data; these quantities are counted under the respective gases in item 13; Deliveries for final consumption); (iii) quantities of LPG extracted by stripping of natural gas in installations of the importing country (item 9.23).

The amount of gas used by energy conversion industries for heating or operation of their equipment and auxiliaries, including consumption of gas for extraction of nitrogen in some natural gases and for liquefying of natural gas, is not considered as energy converted, but counted as consumption by energy producing industries, and included under item 12.

The whole quantity of gas used for energy purposes (other than by the energy producing industries) is counted as final consumption of the industries concerned, i.e. including that part of gas which had been converted (e.g. into heat) by these industries before being used for final consumption.

Item 12 : Consumption by energy producing industries

This item covers the amount of gas used by energy producing industries for heating and operation of their equipment and auxiliaries, including consumption of gas for extraction of nitrogen in some natural gases and for liquefying of natural gas.

Energy producing industries - This item covers both primary energy industries and energy conversion industries. These are undertakings, of one legal form or another, the essential purpose of which is the production, transmission and distribution of energy, and thermal power plants of self-producers, i.e. of undertakings which, in addition to their main activities, themselves produce individually or in common, electric energy intended in part or in whole to meet their own needs.

Primary energy industries - Hard coal and brown coal mines; crude petroleum and natural gas wells, including the separation installations; hydro-electric, geothermal and nuclear power plants.

Energy conversion industries - Patent fuel plants; brown coal briquette, dried brown coal and brown coal coke plants; peat briquette plants; coke-oven plants; gasworks; petroleum refineries; thermal power plants (including thermal power plants of self-producers); and pumping stations at hydro-electric plants.

Item 13 : Deliveries for final consumption

This item covers the whole quantity of gas delivered for energy purposes to other than the energy producing industries, including that part of gas which has been converted (e.g. into heat) by these consumers before being used for final consumption. Included also is the whole amount of gas supplied to pure heating plants for public supply. Deliveries of gas for military purposes are also considered as final consumption.

Item 14 : Losses in transport and distribution

This item contains data on all losses due to transportation and distribution of gas. Included are also variations in stock of natural gas in pipelines, if the relevant data cannot be obtained, otherwise they are counted as changes in stocks (item 5).

Item 15 : Statistical differences

This item establishes the balance of item 11, "Net consumption", on the one hand and, on the other hand, of items 12, "Consumption by energy producing industries", 13, "Final consumption", and 14, "Losses in transport and distribution".

Deliveries for final consumption by type of consumer - The definitions of consumers in the bulletin correspond to those in the International Standard Industrial Classification of All Economic Activities (ISIC)⁽¹⁾ as follows:

| Item and type of consumer | | Corresponding item(s) of the ISIC(1) | Item and type of consumer | | Corresponding item(s) of the ISIC(1) |
|---------------------------|---|--------------------------------------|---------------------------|---|--------------------------------------|
| 13.11 | Iron and steel basic industry | 371 | 13.136 | Non-ferrous metal basic industries | 372 |
| 13.12 | Chemical industry (excl. manufacture of fuels) | 351, 352 354 (part) 355, 356 | 13.137 | Fabricated metal products, machinery and equipment | 38 |
| 13.13 | Other industries and construction | | 13.138 | Industries not specified above and construction | 39, 4103, 42, 50 |
| 13.131 | Mining (excl. fuels) and quarrying | 23, 29 | 13.2 | Transport and storage | 71 |
| 13.132 | Food, beverages and tobacco | 31 | 13.3 | Households and other consumers | |
| 13.133 | Textile, wearing apparel and leather | 32 | 13.31 | Households | No specific items in ISIC |
| 13.134 | Wood, paper and their products; printing and publishing | 33, 34 | 13.32 | Agriculture, hunting, forestry and fishing | 11, 12, 13 |
| 13.135 | Non-metallic mineral products (excl. fuel products) | 36 | 13.33 | Trade, communications, services and activities not specified above, including public lighting | 6, 72, 8, 9, 0 |

Average calorific value of gas production

The average calorific value of gas production is expressed in kcal/m³ (st), e.g. kcal per cu.m. of gas under standard conditions of 15°C, 1013.25 mbar, dry.

Fuels used for the production of gasworks gas

Hard coal - Coal of gross calorific value of more than 5 700 kcal/kg (\approx 24 mega-joules/kg) on ash-free but moist basis (30°C, 96 per cent humidity).

Brown coal - Coal of gross calorific value of 5 700 kcal/kg (\approx 24 mega-joules/kg) and less on ash-free but moist basis (30°C, 96 per cent humidity).

Coke - Solid product obtained from carbonization of hard coal at high temperature.

Other solid fuels - Semi-coke, fuel wood, peat and waste. Semi-coke is the solid product obtained from carbonization of hard coal at low temperature.

Light petroleum products - These are products obtained by distillation of crude petroleum at temperatures between 40°C and 250°C, and having a specific gravity within the range of 0.625 to 0.825.

Medium petroleum products - These are products obtained by distillation of crude petroleum at temperatures between 200°C and 370°C, and having a specific gravity within the range of 0.825 to 0.900.

Heavy petroleum products - These are products obtained by distillation of crude petroleum at temperatures above 350°C, and having a specific gravity of more than 0.900.

Other items

Mains for transport of gas - High pressure feeder mains supplying gas to distribution companies or to industrial consumers but not to domestic consumers. End of year figures.

Distribution network - All mains other than those mentioned under "mains for transport of gas". End of year figures.

Number of household consumers of gas - Number of subscribers on meters for gas consumption by households at end of year.

(1) Statistical Papers, Series M. No.4, Rev.2, 1968, United Nations, New York.

ANNEXE II

DEFINITIONS ET NOTES GENERALES

Les définitions des rubriques utilisées dans le Bulletin annuel de statistiques du gaz pour l'Europe telles qu'elles figurent ci-dessous, sont conformes à celles élaborées par la Conférence des statisticiens européens et le Comité du gaz de la Commission économique pour l'Europe de l'Organisation des Nations Unies. Lorsqu'une série s'écarte trop de ces définitions et/ou que les données sont incomplètes, ces divergences sont signalées en notes.

Gaz

Gaz naturel — Cette dénomination englobe les gaz naturels non associés (c'est-à-dire provenant de gisements fournissant seulement des hydrocarbures gazeux) et les gaz associés (c'est-à-dire provenant de gisements fournissant à la fois des hydrocarbures liquides et des hydrocarbures gazeux), ainsi que le méthane récupéré aux têtes de tubage dans les mines de charbon, et le gaz de gadoues.

Gaz d'usine à gaz — Tous types de gaz produits par des entreprises, quel que soit leur statut juridique, dont le but essentiel est de produire, de transporter et de distribuer des gaz manufacturés. Cette dénomination s'applique aux gaz obtenus par carbonisation (y compris les gaz produits dans les fours à coke des usines à gaz et dans les régies municipales gazières), par gazéification totale avec ou sans enrichissement de produits pétroliers, par craquage de gaz naturel ainsi que par reformage ou par simple mélange de gaz.

Gaz de cokerie — Sous-produit des opérations de carbonisation et de gazéification de combustibles solides effectuées par des établissements industriels qui ne dépendent pas d'usines à gaz ou de régies municipales gazières.

Gaz de haut fourneau — Gaz récupéré comme sous-produit à la sortie du haut fourneau.

Gaz de raffinerie — Gaz incondensable recueilli dans une raffinerie de pétrole.

Gaz de pétrole liquéfiés produits aux sources de pétrole brut ou de gaz naturel — Hydrocarbures extraits par désessencement du gaz naturel aux sources de pétrole brut ou de gaz naturel; ils comprennent le butane liquéfié, le propane liquéfié ou les mélanges commerciaux des deux.

Gaz de pétrole liquéfiés (non compris les GPL produits à une source de pétrole brut ou de gaz naturel) — Ils se réfèrent aux hydrocarbures produits aussi bien dans les raffineries qu'en dehors des raffineries au cours du traitement du pétrole brut ou de ses dérivés. Il s'agit surtout du propane et du butane.

Principales rubriques des statistiques du gaz

Rubrique 1 : Production

La production de gaz se réfère aux quantités de gaz extraites ou produites, calculées après élimination de la matière inerte contenue dans le gaz. Sauf indication contraire, la production comprend les quantités consommées par le producteur dans ses opérations de production ainsi que les quantités livrées à d'autres producteurs d'énergie pour transformation ou tous autres usages.

La production de gaz s'entend, d'une manière générale, de la production d'entreprises, quel que soit leur statut juridique, dont le but essentiel est de produire, de transporter et de distribuer du gaz. Cette dénomination couvre aussi le gaz produit ailleurs (par exemple, dans les cokeries ou dans l'industrie carbochimique). Dans le cas de l'industrie pétrochimique, elle ne couvre que les récupérations nettes de gaz (par exemple les GPL).

Gaz naturel — La production de gaz naturel s'entend de la quantité de gaz recueillie à des sources souterraines après: (i) extraction, le cas échéant, du soufre et de l'azote contenus; (ii) séparation, le cas échéant, des fractions liquides utilisables; (iii) déduction, s'il y a lieu, des quantités de gaz naturel réinjectées; (iv) déduction des quantités de gaz utilisées pour le séchage.

Gaz d'usine à gaz — La production de gaz d'usine à gaz comprend les gaz obtenus par carbonisation (y compris les gaz produits dans les fours à coke des usines à gaz et de régies municipales gazières), par gazéification totale avec ou sans enrichissement de produits pétroliers, par craquage du gaz naturel ainsi que par reformage ou par simple mélange de gaz.

Gaz de cokerie — Cette production s'entend des quantités de gaz recueillies; elle ne comprend donc pas les quantités de gaz perdues.

Gaz de haut fourneau — Cette production s'entend des quantités de gaz recueillies. Il s'agit d'une production nette et ne comprend donc pas les quantités de gaz perdues (par exemple par brûlage à la torche), ni les quantités consommées dans les hauts fourneaux pour le chauffage du vent et à d'autres fins.

Gaz de raffinerie — La production de gaz de raffinerie s'entend des quantités de gaz produites. Il s'agit d'une production nette et ne comprend donc pas les quantités consommées par les raffineries de ce gaz.

Gaz de pétrole liquéfiés — Cette production englobe: (i) les hydrocarbures extraits par désessencement du gaz naturel aux sources de pétrole brut ou de gaz naturel; (ii) les hydrocarbures extraits par désessencement du gaz naturel importé dans les établissements du pays importateur; (iii) les hydrocarbures produits aussi bien dans les raffineries qu'en dehors des raffineries au cours du traitement du pétrole brut ou de ses dérivés. La production de gaz de pétrole liquéfiés s'entend des quantités de gaz produites, déduction faite des quantités consommées pour la production de ces gaz.

Rubrique 2 : Importations; Rubrique 3 : Exportations

Les importations et les exportations s'entendent des quantités de gaz en provenance ou à destination de pays tiers, que les pays considérés soient ou non membres d'une même union économique ou douanière. Le commerce de transit est, en principe, exclus. En général, les données relatives aux importations et aux exportations sont fondées sur les déclarations des producteurs (ou des exportateurs) et des importateurs; elles peuvent donc différer de celles fournies par les services des douanes et publiées dans les bulletins de statistiques du commerce extérieur.

Lorsque le gaz naturel importé contient certaines quantités de gaz de pétrole liquéfiés, la totalité de gaz importé, c'est-à-dire comprenant les GPL y contenus, figure comme importation de gaz naturel. Les GPL extraits par désessencement du gaz naturel importé dans les établissements du pays importateur sont inclus sous la rubrique 9 et dans les chiffres de production des GPL (rubrique 1), et figurent aussi séparément sous la rubrique 9.23.

Rubrique 5 : Mouvements des stocks

On entend par mouvements des stocks la différence entre les quantités de gaz existant en stocks au début et à la fin de l'année. Le signe + indique l'augmentation nette et le signe - la diminution nette de ces stocks. Cette rubrique tient également compte des variations des stocks de gaz naturel dans les gazoducs lorsqu'on a pu les chiffrer, sinon, elles sont comprises dans la rubrique 14: Pertes dans le transport et la distribution.

Rubrique 9: Gaz transformé

Cette rubrique comprend : (i) les quantités de gaz utilisées pour la production d'énergie électrique dans toutes les centrales thermiques, c'est-à-dire dans les centrales des services publics (entreprises dont le but essentiel est de produire, de transporter et de distribuer de l'énergie électrique) et dans les centrales thermiques d'autoproduiteurs (par exemple, les centrales thermiques exploitées par des entreprises sidérurgiques ou d'autres usines, ainsi que les centrales des administrations des chemins de fer), y compris, le cas échéant, les centrales thermiques des producteurs de gaz (rubrique 9.1) ; et (ii) les quantités de gaz fournies par les industries gazières respectives à d'autres producteurs de gaz pour les opérations de craquage, de reformage et de mélange (rubrique 9.2). (Sont exclues les quantités de gaz fournies aux producteurs de gaz pour distribution (revente en l'état) s'il est possible d'obtenir des chiffres distincts pour ce gaz ; ces quantités sont inscrites dans la rubrique 13 "Livraisons pour consommation finale", sous le type de gaz approprié) ; (iii) les quantités de gaz de pétrole liquéfiés extraites par dessèchement du gaz naturel importé, opération effectuée dans les établissements du pays importateur (rubrique 9.23).

Le gaz utilisé par les industries de transformation d'énergie pour le chauffage ou le fonctionnement de leur matériel et de ses auxiliaires, y compris le gaz consommé pour extraire l'azote de certains gaz naturels et pour liquéfier le gaz naturel, n'est pas considéré comme de l'énergie transformée, mais comme une consommation des industries productrices d'énergie et figure sous la rubrique 12.

La quantité totale de gaz utilisée à des fins énergétiques (en dehors des industries productrices d'énergie) est compté comme consommation finale des industries intéressées, c'est-à-dire y compris la partie du gaz transformée (en chaleur, par exemple) par ces industries avant d'être utilisée en consommation finale.

Rubrique 12: Consommation des industries productrices d'énergie

Il s'agit du gaz utilisé par les industries productrices d'énergie pour le chauffage et le fonctionnement de leur matériel et de ses auxiliaires, y compris le gaz consommé pour extraire l'azote de certains gaz naturels et pour liquéfier le gaz naturel.

Industries productrices d'énergie - Cette rubrique comprend les industries productrices d'énergie primaire et les industries de transformation d'énergie. Il s'agit d'entreprises (quel que soit leur statut juridique), dont le but essentiel est la production, le transport et la distribution d'énergie, ainsi que des centrales thermiques d'autoproduiteurs, c'est-à-dire d'entreprises qui, subsidiairement à leurs activités principales, produisent elles-mêmes, individuellement ou en commun, de l'énergie électrique destinée en totalité ou en partie à leurs besoins propres.

Industries productrices d'énergie primaire - Industries d'extraction de la houille et du lignite ; les puits de pétrole ou de gaz naturel, y compris les installations de séparation ; et les centrales électriques hydrauliques, géothermiques et nucléaires.

Industries de transformation d'énergie - Les usines d'agglomérés ; les usines de briquettes de lignite, de charbons bruns séchés et de coke de lignite ; les usines de briquettes de tourbe ; les cokeries ; les usines à gaz ; les raffineries de pétrole ; les centrales thermiques (y compris les centrales thermiques d'autoproduiteurs) et les installations de pompage des centrales hydro-électriques.

Rubrique 13: Livraisons pour consommation finale

Cette rubrique comprend la quantité totale de gaz fournie à des fins énergétiques à des industries autres que les industries productrices d'énergie, notamment la partie de gaz transformée (en chaleur, par exemple) par ces consommateurs avant d'être utilisée en consommation finale. Est incluse également toute la quantité de gaz fournie à des centrales de chauffage pur pour distribution publique. Les livraisons de gaz à des fins militaires sont également considérées comme une consommation finale.

Rubrique 14: Pertes dans le transport et la distribution

Cette rubrique comprend toutes les pertes de gaz subies en cours de transport et de distribution. Elle tient également compte des variations de stocks de gaz naturel dans les gazoducs si l'on n'a pas pu les chiffrer. Lorsque ces données sont connues, elles figurent sous la rubrique 5 "Mouvements des stocks".

Rubrique 15: Ecart statistique

Cette rubrique détermine la différence entre, d'une part, la rubrique 11, "Consommation nette", et d'autre part, les rubriques 12, "Consommation des industries productrices d'énergie", 13, "Livraisons pour consommation finale", et 14, "Pertes dans le transport et la distribution".

Livraisons pour la consommation finale par catégorie de consommateur - Les définitions de consommateurs, dans le bulletin, correspondent à celles de la Classification internationale type, par industrie, de toutes les branches d'activités économiques (CITI)⁽¹⁾.

| Rubrique et catégorie de consommateurs | Rubrique(s) correspondante(s) de la CITI ⁽¹⁾ | Rubrique et catégorie de consommateurs | Rubrique(s) correspondante(s) de la CITI ⁽¹⁾ |
|---|---|---|---|
| 13.11 Industrie métallurgique de base | 371 | 13.136 Production et première transformation des métaux non ferreux | 372 |
| 13.12 Industrie chimique (non compris la fabrication des combustibles) | 351, 352, 354 (en partie) 355, 356 | 13.137 Fabrication d'ouvrages en métaux, de machines et de matériel | 38 |
| 13.13 Autres industries ; bâtiment et travaux publics | | 13.138 Industries non désignées ci-dessus, Bâtiment et travaux publics | 39, 4103 42, 50 |
| 13.131 Industries extractives (non compris l'extraction de combustibles) | 23, 29 | 13.2 Transports et entrepôts | 71 |
| 13.132 Denrées alimentaires, boissons et tabac | 31 | 13.3 Usages domestiques et autres consommateurs | |
| 13.133 Textiles, habillement et cuir | 32 | 13.31 Usages domestiques | Pas de désignation spéciale dans la CITI |
| 13.134 Bois, papier et leurs produits ; imprimerie et édition | 33, 34 | 13.32 Agriculture, chasse, sylviculture et pêche | 11, 12, 13 |
| 13.135 Fabrication de produits minéraux non métalliques (non compris les dérivés de combustibles) | 36 | 13.33 Commerce, communications, services et activités non désignées ci-dessus, y compris l'éclairage public | 6, 72, 8, 9, 0 |

(1) Etudes statistiques, Séries M, n° 4, Rev.2, 1969, Nations Unies, New York.

Pouvoir calorifique moyen de la production de gaz

Le pouvoir calorifique moyen de la production de gaz est exprimée en kcal/m³ (st), c'est-à-dire, en volume standard de 15°C, sous une pression de 1013,25 mbar, gaz sec.

Combustibles utilisés pour la production de gaz d'usine à gaz

Houille - Charbons d'un pouvoir calorifique supérieur dépassant 5 700 kcal/kg (\approx 24 méga-Joules/kg) sur échantillon humide, exempt de cendres (30°C et 96% d'humidité).

Lignite - Charbons d'un pouvoir calorifique supérieur ne dépassant pas 5 700 kcal/kg (\approx 24 méga-Joules/kg) sur échantillon humide, exempt de cendres (30°C et 96% d'humidité).

Coke - Produit solide obtenu par la carbonisation des charbons à haute température.

Autres combustibles solides - Semi-coke, bois de chauffage, tourbe et déchets. Le semi-coke est le produit solide obtenu par la carbonisation des charbons à basse température.

Produits pétroliers légers - Produits obtenus par la distillation du pétrole brut à des températures comprises entre 40°C et 250°C, d'une densité comprise entre 0,625 et 0,825.

Produits pétroliers moyens - Produits obtenus par la distillation du pétrole brut à des températures comprises entre 200°C et 370°C, d'une densité comprise entre 0,825 et 0,900.

Produits pétroliers lourds - Produits obtenus par la distillation du pétrole brut à des températures au-dessus de 350°C, d'une densité de 0,900 ou plus.

Autres rubriques

Conduites pour le transport du gaz - Conduites d'alimentation à haute pression, fournissant le gaz aux compagnies de distribution ou aux consommateurs industriels, mais non aux consommateurs domestiques. Chiffres en fin d'année.

Conduites pour la distribution du gaz - Cette catégorie couvre toutes les conduites autres que celles définies ci-dessus. Chiffres en fin d'année.

Nombre de consommateurs domestiques - Nombre d'abonnés sur compteurs de consommation domestique à la fin de l'année.

ПРИЛОЖЕНИЕ 11

ОПРЕДЕЛЕНИЯ И ОБЩИЕ ЗАМЕЧАНИЯ

Нижеследующие определения статей, охваченных Ежегодным бюллетенем европейской статистики газа, относятся к определениям, выработанным в рамках Конференции европейских статистиков и Комитета по газу Европейской Экономической Комиссии Организации Объединенных Наций.¹ В тех случаях, когда отдельные ряды существенно отличаются от этих определений и/или охват является неполным, различия указываются в сносках.¹

ОПРЕДЕЛЕНИЯ РАЗЛИЧНЫХ ВИДОВ ГАЗА

ПРИРОДНЫЙ ГАЗ — охватывает как неассоциированный природный газ (т.е. природный газ, добываемый в районе месторождений лишь газообразных углеводородов), так и ассоциированный природный газ (т.е. природный газ, добываемый в районе месторождений как жидких, так и газообразных углеводородов), а также метан, улавливаемый в нефтяных скважинах угольных шахт, и газ сточных вод.¹

ЗАВОДСКОЙ ГАЗ — охватывает все виды газов, производимых предприятиями, независимо от их юридического статуса, основная цель которых заключается в производстве, транспортировке и распределении произведенного газа.¹ Сюда же относится газ, получаемый путем коксования (включая газ коксовых печей, получаемый на газовых заводах и коммунальных газовых предприятиях), полной газификации с обогащением нефтепродуктами или без него, крекинга природного газа, риформинга и простого смешивания газов.

КОКСОВЫЙ ГАЗ — получается в качестве побочного продукта при процессах коксования и газификации твердого топлива, осуществляемых на промышленных предприятиях, которые не связаны с газовыми заводами и коммунальными предприятиями, производящими газ.¹

ДОМЕННЫЙ ГАЗ — получается в качестве побочного продукта в доменных печах, он улавливается при выходе из печи.¹

НЕФТЕЗАВОДСКОЙ ГАЗ — охватывает неконденсирующийся газ, получаемый на нефтеперерабатывающих заводах.¹

СЖИЖЕННЫЙ НЕФТЯНОЙ ГАЗ, ПОЛУЧАЕМЫЙ НА МЕСТОРОЖДЕНИЯХ НЕФТИ И ПРИРОДНОГО ГАЗА — Он охватывает углеводороды, извлекаемые путем отгонки природного газа на месторождениях нефти и природного газа, т.е. сжиженный бутан, сжиженный пропан или любую товарную смесь обоих видов газа.¹

СЖИЖЕННЫЙ НЕФТЯНОЙ ГАЗ (ПОМИМО ГАЗА, ПОЛУЧАЕМОГО НА МЕСТОРОЖДЕНИЯХ НЕФТИ И ПРИРОДНОГО ГАЗА) — Он охватывает углеводороды, получаемые на нефтеперерабатывающих заводах и других предприятиях в процессе переработки сырой нефти или ее производных.¹ Главным образом сюда относятся пропан и бутан.¹

ОСНОВНЫЕ СТАТЬИ СТАТИСТИКИ ГАЗА

СТАТЬЯ 1: ПРОИЗВОДСТВО

Под добычей и производством газа подразумевается объем добытого и произведенного газа, подсчитанный после возможного удаления инертных веществ, содержащихся в газе. Обычно (если нет иных указаний) производство включает объем газа, потребленный производителем в процессе производства, а также поставленный другим производителям энергии для его преобразования или иных целей.¹

Как правило, под производством газа подразумевается производство его предприятиями, независимо от их юридического статуса,¹ основным назначением которых являются производство, подача и распределение газа. Кроме того, сюда входит также газ, производимый на предприятиях, помимо тех, которые указаны выше (например, в коксовых печах, на коксохимических предприятиях). Что касается нефтехимической промышленности, то учитываются только чистые поставки газа (например, сжиженный нефтяной газ).¹

ПРИРОДНЫЙ ГАЗ — Под добычей природного газа понимается объем газа, извлеченного из подземных источников после 1) удаления содержащихся в нем серы и азота, если это практикуется, 2) удаления полезных жидких фракций, в тех случаях, когда это применяется, 3) вычета количества обратно закаченного природного газа, если это практикуется, и 4) вычета количества газа, использованного для сушки.¹

ЗАВОДСКОЙ ГАЗ — Производство заводского газа включает газ, полученный путем карбонизации (включая газ коксовых печей, получаемый на газовых заводах и коммунальных газовых предприятиях), полной газификации с обогащением нефтепродуктами или без него, путем крекинга природного газа, риформинга и простого смешивания различных видов газа.¹

КОКСОВЫЙ ГАЗ — Под производством коксового газа понимается объем полученного газа.¹ Следовательно, в эти данные не входит объем потерянного газа.¹

ДОМЕННЫЙ ГАЗ — Под производством доменного газа понимается объем полученного газа.¹ Данные указываются в нетто, т.е. за исключением количества потерянного газа, например в результате сжигания в факелах.¹ Также исключается количество газа, использованного при производстве чугуна для нагрева дутья в воздушнонагревателях и в других целях.

НЕФТЕЗАВОДСКОЙ ГАЗ — Производство нефтезаводского газа относится к объему производства. Данные указываются в нетто, т.е. за исключением количества газа, потребленного нефтеперерабатывающими заводами.¹

СЖИЖЕННЫЙ НЕФТЯНОЙ ГАЗ — Производство сжиженного нефтяного газа включает: 1) углеводороды, полученные путем выделения из природного газа на месторождениях нефти и природного газа, 2) углеводороды, полученные путем выделения из импортированного природного газа на установках страны-импортера, и 3) углеводороды, произведенные как на нефтеочистительных заводах, так и на других предприятиях в ходе обработки сырой нефти или ее продуктов. Производство сжиженного нефтяного газа относится к объему этого газа без учета собственного потребления производителей этого газа.¹

СТАТЬЯ 2: ИМПОРТ, СТАТЬЯ 3: ЭКСПОРТ

Под данными об импорте и экспорте имеется в виду объем газа, соответственно полученного из других стран или поставленного в другие страны, независимо от того, существует ли между соответствующими странами экономический или таможенный союз или нет. В принципе транзитная торговля исключается. Вообще данные по импорту и экспорту основаны на декларациях, предоставленных производителями (или экспортерами) и импортерами; поэтому они могут расходиться с данными, предоставленными таможенными службами и опубликованными в статистических бюллетенях по внешней торговле.

В случае импорта природного газа, содержащего определенное количество сжиженного нефтяного газа, общее количество импортированного газа (т.е. включая сжиженный нефтяной газ, содержащийся в нем) показывается как импорт природного газа. Количество сжиженного нефтяного газа, полученного путем выделения из импортного природного газа на установках страны-импортера, включается в статью 9 и в данные о производстве сжиженного нефтяного газа (статья 1), а также показывается отдельно в статье 9.23.

СТАТЬЯ 5: ИЗМЕНЕНИЯ В ЗАПАСАХ

Изменения в запасах означают разницу между запасами газа на начало и конец года. Для обозначения чистого увеличения запасов используется знак плюс, а для чистого уменьшения запасов – знак минус. В эту статью входят также изменения в запасах природного газа в газопроводах, если могут быть получены соответствующие данные; в противном случае они включаются в потери при транспортировке и распределении (статья 14).

СТАТЬЯ 9: ПРЕОБРАЗОВАННЫЙ ГАЗ

В эту статью включаются: 1) объем газа, использованного для производства электроэнергии на всех тепловых электростанциях, т.е. на электростанциях общего назначения (основным назначением которых является производство, передача и распределение электроэнергии) и на тепловых электростанциях предприятий (например, тепловые электростанции предприятий черной металлургии или других отраслей промышленности, а также железнодорожных предприятий), включая собственные тепловых электростанций газовых предприятий (статья 9.1), 2) объем газа, поставленного соответствующими газовыми предприятиями другим производителям газа для крекинга, риформинга и смешивания газов (статья 9.2) (объем газа, поставленного производителям газа для распределения (перепродажи) как такового, не включается в указанную статью, если можно получить о нем отдельные данные, этот объем учитывается в статье 13 – "Поставки для конечного потребления" – с разбивкой на соответствующие виды газа), 3) количество сжиженного нефтяного газа, полученного путем выделения из природного газа на установках страны-импортера (статья 9.23).

Объем газа, использованного преобразующими энергией предприятиями для нагрева или эксплуатации оборудования и вспомогательных установок, включая потребление газа для извлечения из некоторых природных газов азота и для сжигания природного газа, учитывается не как преобразованная энергия, а как потребление энергетическими предприятиями и включается в статью 12.

Общий объем газа, использованного для энергетических целей (кроме того, который использован энергетическими предприятиями), учитывается как конечное потребление соответствующих отраслей промышленности, т.е. включая ту часть газа, который был преобразован (например, в тепло) этими отраслями промышленности до его использования для конечного потребления.

СТАТЬЯ 12: ПОТРЕБЛЕНИЕ ГАЗА ЭНЕРГЕТИЧЕСКИМИ ПРЕДПРИЯТИЯМИ

В данную статью входит объем газа, использованный энергетическими предприятиями для нагрева и эксплуатации оборудования и вспомогательных установок, включая потребление газа для извлечения азота из некоторых природных газов и для сжигания природного газа.

ЭНЕРГЕТИЧЕСКИЕ ПРЕДПРИЯТИЯ – Эта статья охватывает как предприятия, вырабатывающие первичную энергию, так и предприятия, преобразующие энергию. Сюда входят предприятия, независимо от их юридического статуса, основным назначением которых является производство, передача и распределение энергии, а также тепловые электростанции предприятий, т.е. предприятий, которые, помимо своей основной деятельности вырабатывают самостоятельно или совместно с другими предприятиями электроэнергию, предназначенную для полного или частичного удовлетворения собственных нужд.

ПРЕДПРИЯТИЯ, ВЫРАБАТЫВАЮЩИЕ ПЕРВИЧНУЮ ЭНЕРГИЮ – Такими предприятиями являются каменноугольные и бурогоугольные шахты, нефтяные скважины и скважины природного газа, включая сепарационные установки, гидроэнергетические, геотермические и ядерные электростанции.

ПРЕДПРИЯТИЯ, ПРЕОБРАЗУЮЩИЕ ЭНЕРГИЮ – Такими предприятиями являются брикетные фабрики, предприятия по производству бурогогольных брикетов и высушенного бурого угля и бурогогольного кокса, торфяных брикетов, коксовые заводы, газовые заводы, нефтеперерабатывающие заводы, тепловые электростанции (включая тепловые электростанции, предназначенные для обеспечения собственных нужд предприятий) и насосные станции на гидроэнергетических предприятиях.

СТАТЬЯ 13: ПОСТАВКИ ДЛЯ КОНЕЧНОГО ПОТРЕБЛЕНИЯ

Эта статья охватывает общий объем газа, использованный для энергетических целей, кроме количества газа, использованного энергетическими предприятиями, включая ту часть газа, который был преобразован (например, в тепло) этими предприятиями до его конечного потребления. Сюда входит также весь объем газа, использованный чисто отопительными коммунальными установками. Поставки газа для военных целей также рассматриваются как конечное потребление.

СТАТЬЯ 14: ПОТЕРИ ПРИ ТРАНСПОРТИРОВКЕ И РАСПРЕДЕЛЕНИИ

Данная статья содержит данные о всех потерях, связанных с транспортировкой и распределением газа. Сюда входят также изменения в запасах природного газа в газопроводах, если не могут быть получены соответствующие данные; в противном случае они относятся к изменениям в запасах (статья 5).

СТАТЬЯ 15: СТАТИСТИЧЕСКИЕ РАСХОЖДЕНИЯ

В этой статье устанавливается расхождение между статьей 11, "Чистое потребление", с одной стороны, и статьями 12, "Потребление энергетическими предприятиями", 13, "Конечное потребление" и 14, "Потери при транспортировке и распределении", с другой стороны.¹

ПОСТАВКИ ДЛЯ КОНЕЧНОГО ПОТРЕБЛЕНИЯ ПО ВИДАМ ПОТРЕБИТЕЛЕЙ — Определения потребителей в этом бюллетене соответствуют определениям Международной стандартной хозяйственной классификации всех видов экономической деятельности (МСХК)⁽¹⁾, приведенным ниже:

| СТАТЬЯ И ВИД ПОТРЕБИТЕЛЯ | | Соответствующая статья (и) МСХК (1) | СТАТЬЯ И ВИД ПОТРЕБИТЕЛЯ | | Соответствующая статья (и) МСХК (1) |
|--------------------------|---|-------------------------------------|--------------------------|--|-------------------------------------|
| 13.11 | Черная металлургия | 371 | 13.135 | Нерудные минеральные ископаемые (кроме топливных продуктов) | 36 |
| 13.12 | Химическая промышленность, кроме производства топлива | 351, 352 354 (часть) 355, 356 | 13.136 | Цветная металлургия | 372 |
| 13.13 | Прочие отрасли промышленности, строительство | | 13.137 | Металлообрабатывающая, машиностроение и производство оборудования | 38 |
| 13.131 | Горнодобывающая (кроме топлива) | 23, 29 | 13.138 | Отрасли промышленности, не перечисленные выше, и строительство | 39, 4103, 42, 50 |
| 13.132 | Пищевая, табачная и производство напитков | 31 | 13.2 | Транспорт и складское хозяйство | 71 |
| 13.133 | Текстильная, швейная, обувная и кожевенная | 32 | 13.3 | Бытовой сектор и другие потребители | |
| 13.134 | Деревообрабатывающая и бумажная и их продукты, полиграфическая промышленность и издательское дело | 33; 34 | 13.31 | Бытовой сектор | Особых статей МСХК не существует |
| | | | 13.32 | Сельское и лесное хозяйство, охота и рыболовство | 11, 12, 13 |
| | | | 13.33 | Торговля, связь, услуги и виды деятельности, не перечисленные выше, включая освещение улиц и дорог | 6, 72, 8 9, 0 |

СРЕДНЯЯ ТЕПЛОТВОРНАЯ СПОСОБНОСТЬ ПРОИЗВОДНОГО ГАЗА

Средняя теплотворная способность производного газа выражена в Ккал/м³(см), т.е. при стандартных условиях (15°C, давление — 1013,25 мбар, в сухом состоянии).¹

ТОПЛИВА, ИСПОЛЗУЕМЫЕ ДЛЯ ПРОИЗВОДСТВА ЗАВОДСКОГО ГАЗА

КАМЕННЫЙ УГОЛЬ — Уголь с высшей теплотворной способностью более 5 700 ккал/кг (≈ 24 Мега-джоуля/кг) на беззольной, но влажной основе (при 30°C и влажности 96%).¹

БУРЫЙ УГОЛЬ — Уголь с высшей теплотворной способностью 5 700 ккал/кг (≈ 24 Мега-джоуля/кг) и меньше на беззольной, но влажной основе (при 30°C и влажности 96%).¹

КОКС — Твердый продукт, получаемый путем коксования каменного угля при высокой температуре.¹

ПРОЧИЕ ВИДЫ ТВЕРДОГО ТОПЛИВА — Полукокс, древесное топливо, торф и отходы. Полукоксом является твердый продукт, получаемый путем коксования каменного угля при низкой температуре.¹

ЛЕГКИЕ НЕФТЕПРОДУКТЫ — Это продукты, получаемые путем перегонки сырой нефти при температурах между 40° и 250°C и имеющие удельный вес в пределах от 0,625 до 0,825.¹

СРЕДНИЕ НЕФТЕПРОДУКТЫ — Это продукты, получаемые путем перегонки сырой нефти при температурах между 200° и 370°C и имеющие удельный вес в пределах от 0,825 до 0,900.¹

ТЯЖЕЛЫЕ НЕФТЕПРОДУКТЫ — Это продукты, получаемые путем перегонки сырой нефти при температурах выше 350°C и имеющие удельный вес более чем 0,900.¹

ДРУГИЕ СТАТЬИ

МАГИСТРАЛЬНЫЕ ГАЗОПРОВОДЫ — Магистральные газопроводы высокого давления, поставляющие газ распределительным компаниям или промышленным потребителям, но не бытовым (домашним) потребителям.¹ Данные даются в конце года.¹

ГАЗОРАСПРЕДЕЛИТЕЛЬНЫЕ СЕТИ — Все другие магистрали (сети), кроме тех, которые указаны в показателе "Магистрали для транспортировки газа".¹ Данные даются в конце года.¹

ЧИСЛО ДОМАШНИХ ХОЗЯЙСТВ—ПОТРЕБИТЕЛЕЙ ГАЗА — Число абонентов на счетчиках для потребления газа домашними хозяйствами. Данные даются в конце года.

كيفية الحصول على منشورات الأمم المتحدة

يمكن الحصول على منشورات الأمم المتحدة من المكتبات ودور التوزيع في جميع أنحاء العالم . استعلم عنها من المكتبة التي تتعامل معها أو اكتب إلى : الأمم المتحدة ، قسم البيع في نيويورك أو في جنيف .

如何购取联合国出版物

联合国出版物在世界各地的书店和经售处均有发售。请向书店询问或写信到纽约或日内瓦的联合国销售组。

HOW TO OBTAIN UNITED NATIONS PUBLICATIONS

United Nations publications may be obtained from bookstores and distributors throughout the world. Consult your bookstore or write to: United Nations, Sales Section, New York or Geneva.

COMMENT SE PROCURER LES PUBLICATIONS DES NATIONS UNIES

Les publications des Nations Unies sont en vente dans les librairies et les agences dépositaires du monde entier. Informez-vous auprès de votre libraire ou adressez-vous à : Nations Unies, Section des ventes, New York ou Genève.

КАК ПОЛУЧИТЬ ИЗДАНИЯ ОРГАНИЗАЦИИ ОБЪЕДИНЕННЫХ НАЦИЙ

Издания Организации Объединенных Наций можно купить в книжных магазинах и агентствах во всех районах мира. Наводите справки об изданиях в вашем книжном магазине или пишите по адресу: Организация Объединенных Наций, Секция по продаже изданий, Нью-Йорк или Женева.

COMO CONSEGUIR PUBLICACIONES DE LAS NACIONES UNIDAS

Las publicaciones de las Naciones Unidas están en venta en librerías y casas distribuidoras en todas partes del mundo. Consulte a su librero o diríjase a: Naciones Unidas, Sección de Ventas, Nueva York o Ginebra.
